# ▶ SLIDING DOOR SYSTEMS

Although commonly referred to as patio doors, Aluminum 2000's SALON DOORS are not residential sliding doors. We have designed these doors specifically for marine use, believing they are the best in the business. The Series 1600-A doors also incorporate our famous track and roller system which keeps the doors secure and free of rattles.

Our unique sill design virtually eliminates water entry, even under the worst conditions. The lock stiles are designed wide enough to accept a full range of quality hardware from moderate to maximum security.

## SERIES 1600-A

Salon Doors can be custom designed to fit your specifications, to include two, three or four panels with a variety of matching color finishes and inserts.

### ▶ APPLICATION

Series 1600-A Sliding Doors are generally used in an aft bulkhead location as a cabin entry system, and are appropriate for motor yachts, sport cruisers and houseboats.

### ▶ FABRICATION

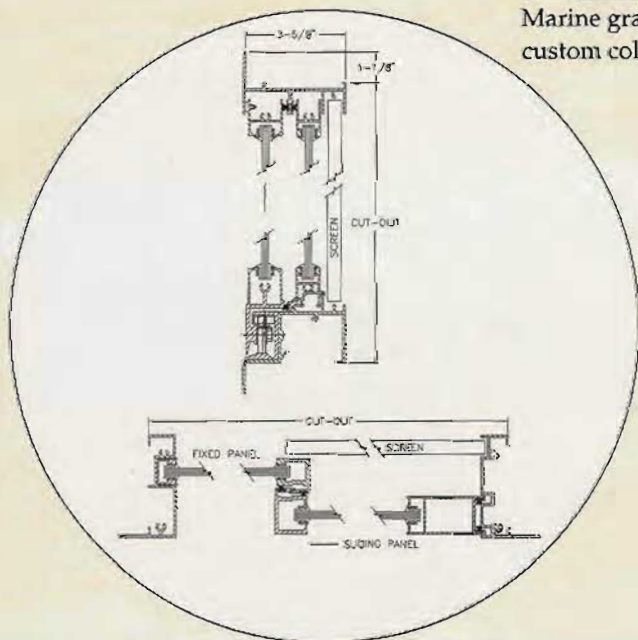

The master frame is of aluminum extrusion and is mechanically assembled for ease of shipment. Door panels are extruded to allow for glazing with 1/4" tempered glass. Master frame flanges allow for ease of installation.

### ▶ HARDWARE

Marine quality locksets, day-latches, handles and security systems are available upon your request.

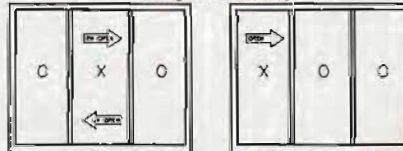

### ▶ FINISH

Marine grade polyester powder coatings in various standard and custom colors are available.

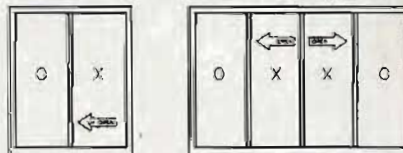

### AVAILABLE CONFIGURATIONS

X = Sliding O = Stationary

# ▶ SLIDING DOOR SYSTEMS

Aluminum 2000's SLIDING DOORS set the new standard for quality and reliability in today's marine industry. These custom extrusions have been designed to incorporate a dual integral tracking system, weather seals, and hardware options to ensure positive, long-lasting performance. In addition to our standard welded master frames and innovative composite panels, this design allows for the versatility of both exterior or interior installations plus angular and radius configurations.

## SERIES 1600-B

As with every quality product from Aluminum 2000, these entry doors will be custom designed to fit your specifications, whether single, double or multiple panel, with a variety of matching color finishes.

### AVAILABLE CONFIGURATIONS

PANEL:	OPERATION:	USE:
Single	Left/Right	Inside/Outside
Double	X	X
Multiple	X	X
Angular	X	X
Radius	X	X

#### ▶ APPLICATION

Series 1600-B SLIDING DOORS are typically used in a cabin side and aft bulkhead location as a salon entry and are appropriate for motor yachts, sport cruisers, sailboats and houseboats.

#### ▶ FABRICATION

The master frame of aluminum extrusions is welded and mechanically assembled to assure a weather-tight jamb. Door panels are composite and glazed using 1/4" tempered glass and cored panels. Custom angled and radius shapes are available with developed designs to allow for ease of installation.

#### ▶ HARDWARE

Marine quality locksets, day-latches, stainless steel handles and security systems are available upon your request.

#### ▶ FINISH

Marine grade polyester powder coatings in various standard and custom colors are available.

# ALUMINUM A2000

## ► FABRICATION

Aluminum extrusions of marine grade alloys are the strong foundation of every door and window system that we produce. The design incorporates the benefits of both mechanical and welded fabrication. This combination results in construction that exceeds most others for structural strength.

## ► WEATHERING

Premium adhesives and sealant gaskets are used in every area requiring watertight conditions. An exclusive "Interlock" prevents water entry on all sliding doors and windows even under the most severe conditions.

## ► GLAZING

The flexibility of our designs allows a wide variety of acrylics, tempered and laminated glass, and custom combination inserts to be used to enhance enclosure appearance.

## ► HARDWARE

All hardware must meet or exceed our high quality standards. A full range of finishes are available in stainless, chrome, brass, anodized and custom colors.

## ► FINISHING

As the most visible part of each assembly, the importance of its finish can not be overlooked. Each part is prepared and finished with either high quality polyester powder coating or marine grade urethane in various standard and custom colors.

## ► INSTALLATION

Various types of mounting systems have been reviewed and considered to ensure easy and reliable installation. The compatibility of our systems enables them to be used by the OEM market as well as by individuals or marine repair services.

## ► DESIGN SERVICE

Boat designers often encounter situations which require highly unusual designs. Our talented staff will approach each project openly with your specific requirements in mind. We will work closely with you during all phases of development and manufacturing.
