1600 M Series Multi Panel Enclosure

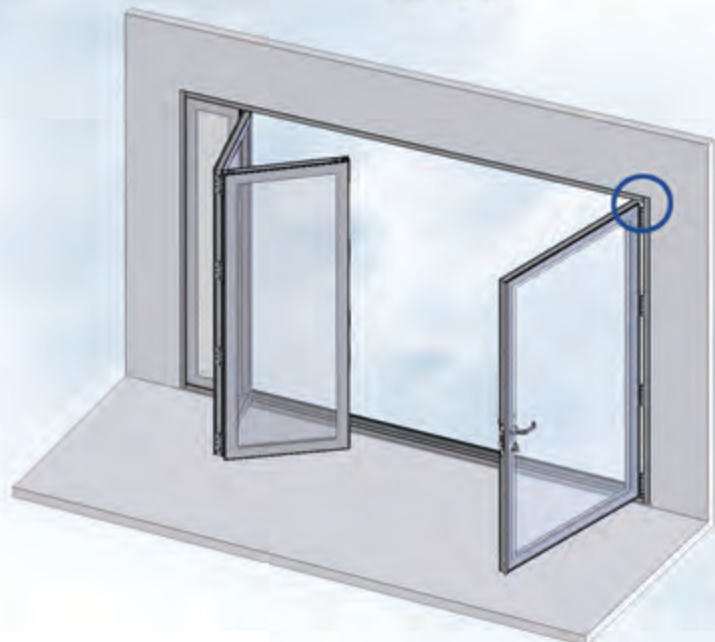

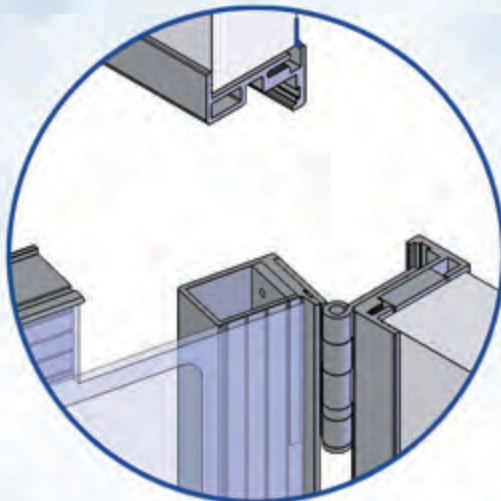

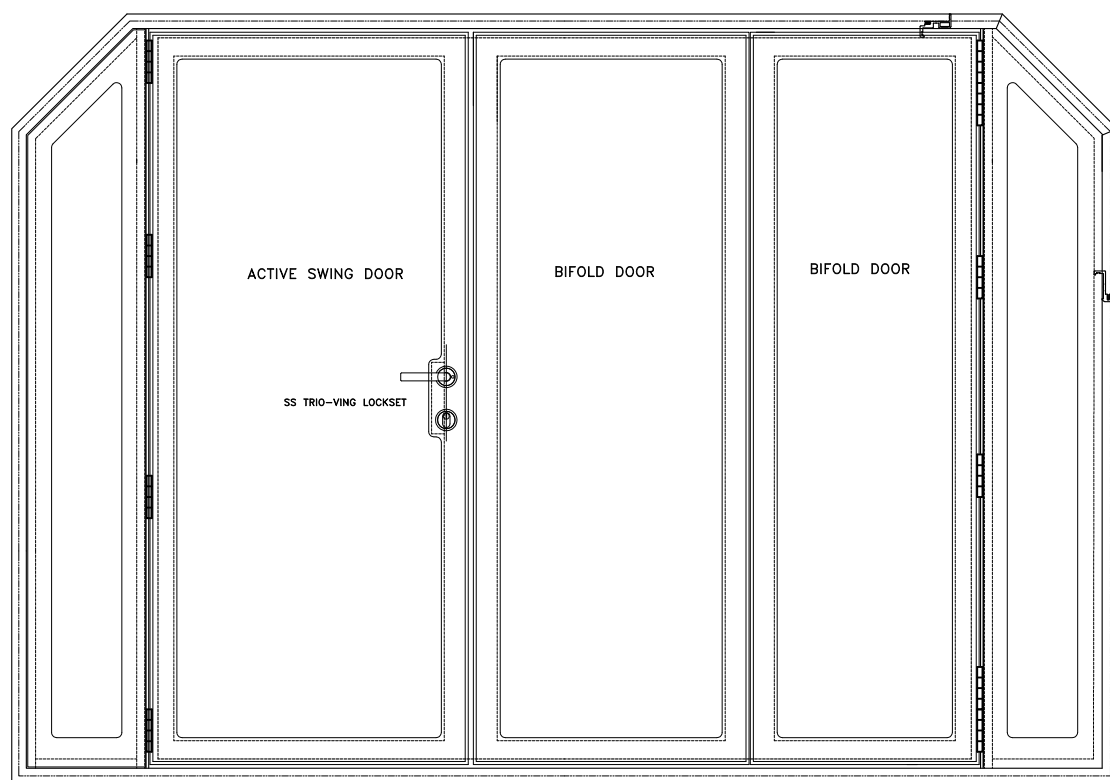

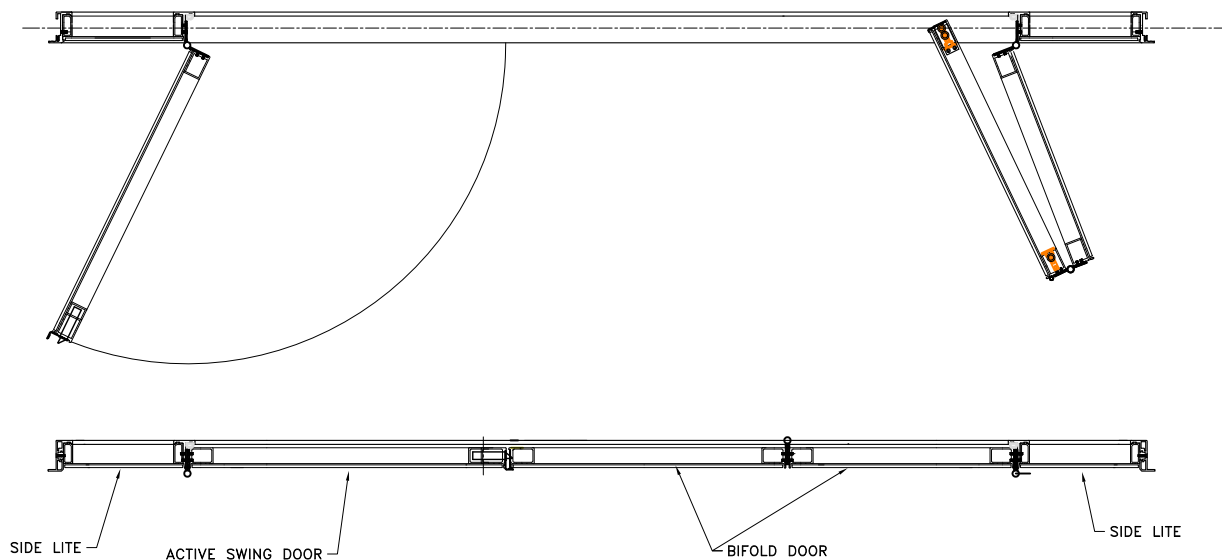

The newly developed 1600 M multi panel bulkhead door enclosure has been designed to provide a flush, frameless exterior appearance with the ability to hinge completely open, providing access from the interior of the yacht directly to the cockpit.

Available as bifold, or a combination of bifold and swing door, this door system incorporates a robust structure and a hinge system designed to prevent racking and sagging while allowing the tempered glass panels to move smoothly and consistently.

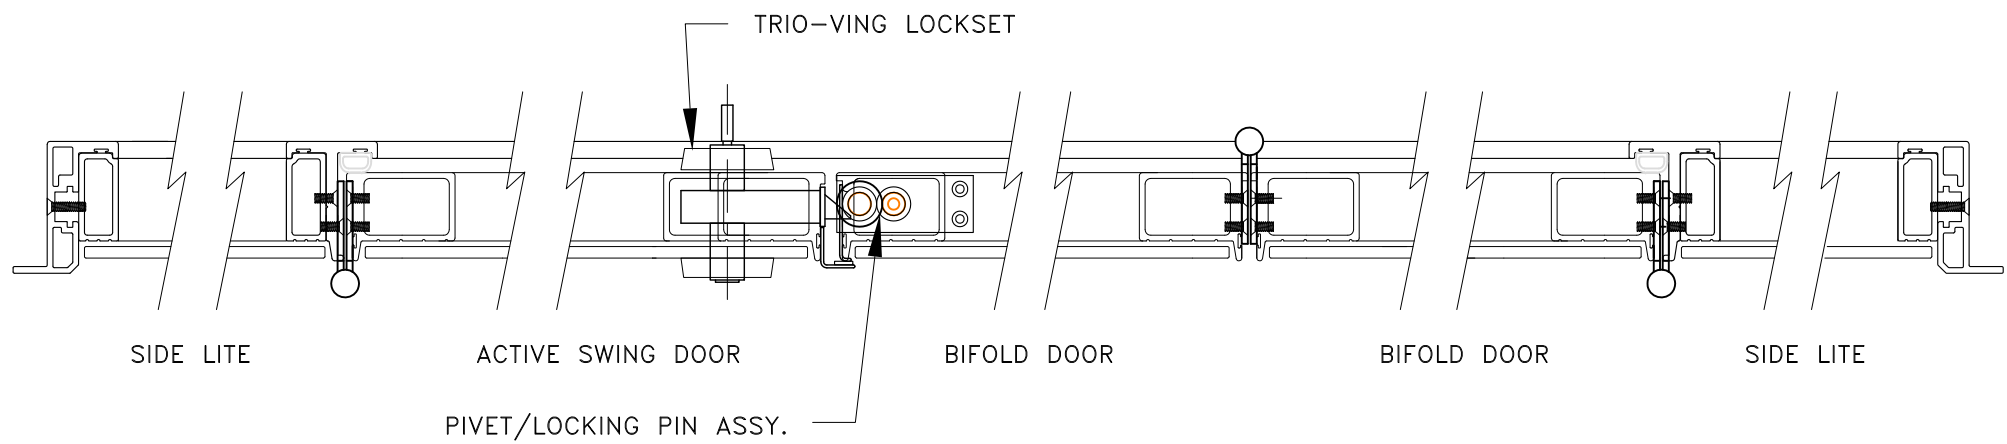

An innovative track system allows the bifold section to be mechanically stopped at predetermined positions for safety in heavy seas.

Heavy duty marine grade hinges and locksets, and finishes are used throughout.
